

Author's Guide

Journal of Veterinary Research Advances (JVRA)

Objectives of the Journal

The Journal of Veterinary Research Advances (JVRA) is double blind peer-reviewed OPEN ACCESS international journal. The aims of this journal are to improve and expand knowledge in the field of veterinary science. Research papers and reports on a wide range of related topics are published in the journal after being evaluated by expert reviewers.

Types of contribution

1. **Full paper (original article):** A full paper covers all aspect of report and the results of original research required for the precise description and interpretation of the work.
2. **Review article:** Review article is written by scholar(s) and expert(s) in the field who has (have) already published at least 5 research papers on the same subject. In the review article, the results of published research are closely evaluated, merit and demerits are stated and suggestions for further improvement are to be provided. The editor of JVRA welcomes review articles; however, preliminary discussion with the editor regarding the subject and length of the article is advisable before submission.
3. **Short communication:** Short communications are intended to rapidly communicate novel ideas and results in new and developing areas of veterinary sciences, but are limited in the level of performed investigations and are not good enough stuff to fill the requirements of a full paper. Short communications may be submitted to JVRA as such, or may result from a request to condense a regular paper during the review process.
4. **Scientific report:** These articles deal with important issues to researchers/clinicians in all areas of veterinary science. These types of articles include a title page, summary, case presentation, results, discussion and references sections.
5. **Letter to editor:** Letters on all topics related to the science and Veterinary practice would be considered for publication. The length should not usually exceed 350 words and may be shortened for publication. References should be given when necessary. Upto two photographs can be accommodated if appropriate and tables will occasionally be allowed. Full address details of all authors as well as an e-mail address for the corresponding author should be supplied and will be published.

Submission of manuscripts

Submission to the *Journal of Veterinary Research Advances (JVRA)* proceeds online via the following link: <http://jvra.org.in> . After Login, Authors will be guided step-by-step through uploading files directly from their device. Electronic DOC proofs will be automatically generated from uploaded files and used for subsequent reviewing.

Authors are invited to suggest the names of 2 reviewers (with their e-mail addresses) whom are qualified to evaluate their submission. Such names do not, however, imply that they will definitely be used as reviewers.

Authors should send queries concerning the submission process or journal procedures to <http://jvra.org.in> and can check the status of their manuscript within the publication process using the editorial manager of JVRA. Submission of an article is understood to imply that the article should be original and not already published in or simultaneously sent to be published elsewhere. Submission also implies that all authors have approved the paper for release and are in agreement with its content.

Ethics

Manuscripts describing any experimental research on animals should include a statement of approval by the Ethical Committee of the institute where the work was done, mentioning that the study was carried out according to the legal requirements of the relevant local or national authority. Before papers describing animal studies are accepted for publication in the *Journal of Veterinary Research Advances (JVRA)*, the authors must convince the editors that the work conformed to appropriate ethical standards. The care and use of experimental animals should comply with ethical guidelines and policies.

Plagiarism

Plagiarism is globally recognized as a serious academic offence. As part of our commitment to the protection and enhancement of the peer review process, editors assist the scientific community in all aspects of publishing ethics, especially in cases of (suspected) duplicate submission or plagiarism. Manuscripts will be checked with the online plagiarism software to ensure content originality. Manuscripts with remarkable similarity will be returned to the authors.

Manuscript preparation

Review article: There is no specific format for review article. Refer latest published review article from <http://jvra.org.in> for general format of the review. Minimum 50% references must be from past five years.

Research article:

Title page: The front page should include the title of the manuscript, full names of authors and their institutional affiliation(s). The address for correspondence, including the name of corresponding author, position, address (institutional affiliation, city, zip-code and country), telephone and fax number and e-mail address, should be given.

We follow double blind peer review process. So, please do not include author name and affiliations in manuscript file. However, you have to include in step of submission.

Abstract:

The abstract should be concise, less than 250 words with distinct headings including aims, materials and methods, results and conclusion. Key words (3 to 5) should be listed alphabetically at the bottom of the abstract. Key words SHOULD be selected from Medical Subject Headings (MeSH) terms.

Introduction: It should be in three or more paragraph. Second last paragraph should contain the significance of the research and last paragraph should contain aim of the study.

Materials and Methods:

The materials and methods section should include the design of the study, the type of materials involved and a clear description of all comparisons. It should be concise but sufficient for repetition by other qualified investigators. Procedures that have been published previously should not be described in detail, but merely cited with appropriate references. However, new or significant modifications of previously published procedures need full descriptions. The sources of special chemicals, equipment or preparations should be given along with their company name and country. For all chemicals and reagents used, a generic name should be provided rather than a brand name. For animal experimentation reported in this journal, it is expected that the guidelines for the care and use of laboratory animals (approved by appropriate authority) be observed. The acknowledgement of the ethical guidelines of the animal welfare committee is strongly encouraged.

Results: This part should include a concise textual description of the data presented in tables and figures. Repetition of the same data in different forms should be avoided. Avoid extensive use of graphs to present data, which might be more concisely presented in the text or tables. Well-prepared tables and figures must be a cardinal feature of this section as they convey the major observations to readers. Information provided in tables and figures should not be repeated in the text, but focus attention on the importance of the significance and impact of the principal findings of the study.

Discussion: The discussion section should provide an interpretation of the results in relation to previously published work and to the experimental system at hand. It should consider the results in relation to any hypotheses advanced in the introduction. This may include an evaluation of the methodology and of the relationship of new information to the knowledge in that field. It must not contain extensive repetition of the results section or reiteration of the introduction.

Conclusion: This section should contain extract of your results. Please do not repeat the results data of your research here.

Acknowledgement

All persons who do not qualify as authors should be acknowledged and their particular contribution described. All sources of funding for the reported work, for all the authors, must be acknowledged. Both the research funder and the grant number (if applicable) should be given for each funding source.

Conflict of interest

At the end of the text, under a subheading “Conflict of interest statement” all authors must disclose any financial and personal relationships with other people or organizations that might inappropriately influence or bias their work.

References: References section must include all relevant published works cited in the text in alphabetical order, starting with the first author's surname and numbered consecutively. Journal title should be abbreviated. If the referenced article is written by one author, it is cited as (Kumar, 2020) in the text. If written by two or more authors, it must be cited as (Kumar and Singh, 2020) and (Kumar et al., 2020), respectively.

Here are four examples of the referencing style:

Kumar PJ (2020). Molecular characterization of dermatophytes isolated from horses. *J. Vet. Res. Adv.*, 1(2): 28-37.

Kumar PJ and Singh AK (2019). Evaluation of reproductive performance of smallholder dairy cows. *J. Vet. Res. Adv.*, 01(02): 38-45.

Miah AG, Osman AA, Mobarak MH, Parveen R and Salma U (2020). Evaluation of supplementation of hydroponic fodder on productive and reproductive performance of rabbit. *J. Vet. Res. Adv.*, 02 (02): 41-50.

Cavanagh D and Naqi SA (1997). Infectious bronchitis. In: Calnek, BW; Barns, JH; Beard, CW; McDougald, LR and Saif, YM (Eds.), *Disease of poultry*. (10th Edn.), Ames, Iowa, Iowa State University Press. PP: 511-526.

Tables: Tables should be in a Word file separately from the text, double spaced. Vertical rulings in tables are inadvisable. Each table should include a title (above the table) that summarizes it in 20 words at most. Tables should be numbered and cited in sequence using Arabic numerals (i.e. Table 1, 2, 3 etc.) and cited in text in consecutive numerical order. Table footnotes should be typed in superscripts (a, b) below the table. Duplication of data in tables, figures and text must be avoided. Tables should be kept to a minimum and created in Word format and left-to-right direction.

Figures/Graphs etc.: Please do not include figures in Word file but upload the PNG/JPG file of each figure in submission site step. However include figure caption in word file.

Authorship

No changes of the authorship including addition, deletion, or rearrangement of author names are possible after acceptance of manuscript.

Author declaration certificate: It could be downloaded from home page of website and be submitted necessarily with all required information at the time of manuscript submission.

Proofs

Electronic proof will be sent in Word/PDF format to the corresponding author to check for type setting accuracy. Page proofs are considered as the final version of the manuscript. At this stage, except for typographical or minor corrections, no changes or additions are permissible. Corrected proofs should be returned to the publisher within 72 hours of receipt. It is important to ensure that all corrections be sent in one communication.

Publication Charges

JVRA is Open Access journal. Article processing fee is not charged, however some nominal publication charges allow the publisher to make articles immediately available online to readers.
